for ages
4-14

Kai, Firefighters!

We all know a firefighter's work is vital in keeping the city safe; from getting cats out of trees to stopping actual fires! The work never ends!

Now is your time to prove you've got what it takes to become part of KidZania's Fire & Rescue Service!

We all need to work hard to recognise the different causes of a fire and act fast to ensure that no harm comes to ourselves or anyone else in the home.

Common causes of a fire

Fire prevention techniques

Store flammable items safely

Matches and other dangerous equipment like lighter fluid needs to be kept well away from any live flames or other objects that could allow it to spontaneously catch alight.

Turn off switches

If you've been playing on the computer or a games console, make sure to turn it off at the switch once you've finished. This stops any equipment overheating and sparking.

Close doors

Simple enough! Putting a door between you and the fire slows down the flames.

Test fire alarms

They're there for a reason! We need to know if our emergency equipment is working just in-case a real fire breaks out one day!

Forgotten Appliances

Walking away from a pot on the stove or leaving an iron on means you won't be there to prevent any flames from getting out of control.

Faulty Electrical Equipment

If you see a plug socket or a cable sparking, make sure to tell an adult immediately.

Candles

If candles are left burning for a long time, they become more dangerous and likely to fall over or spread flames to nearby objects like curtains.

Toys/Clothes on Heaters

Items made of flammable materials like linen and cotton can easily catch on fire if left near intense heat.

Lit cigarettes

If they aren't put out properly, they can spark larger flames.

Show us that you've passed your fire safety training by taking a video of your hazard prevention techniques and tagging us [@KidZaniaLondon](#). Find out how others are making their homes safer by using the hashtag [#KidZaniaAtHome](#).

TASK 1

Spot the hazards! There are several scenarios in the picture below that could lead to a fire breaking out. Can you spot them all?

Circle your answers and then label what could be done to prevent the fire from happening.

TASK 2

Now you've passed your first stage of training, it's time to get practical! Take a pen and paper and make notes of any fire hazards you can spot in your own home. Once completed, find an adult and alert them to the potentially dangerous scenario before advising them on what to do next.
